

FAT CAT DATA

Quantitative AI consulting for sports organizations

COMPANY SNAPSHOT

Better decisions. Working software. Yours to own.

Fat Cat Data is a quantitative AI consultancy for college and professional sports organizations. We turn your data and your questions into practical decision tools, from an early proof of concept to software your staff can use.

WHAT WE DO

Quantitative modeling

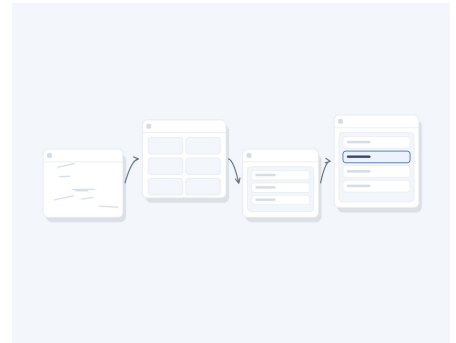

Player evaluation, draft boards, contract valuation, and scouting optimization. Statistical models produce the numbers; every result can be traced and explained.

Evidence-grounded AI

Assistants that turn scouting notes, research, and model outputs into useful answers and briefs. The AI explains the evidence; it does not invent the numbers.

PoC to MVP

Private decision tools built around your workflow. Start with a proof of concept, develop an MVP, and take ownership of the code, models, and documentation.

HOW WE WORK

One scope. One project price. Founders do the work. You own the software. Optional ongoing hosting, maintenance, and model operations keep it running after handoff.

THE FOUNDERS

Founder-led and deliberately small, with experience across sports analytics, finance, operations, and engineering.
